Pro-Am Player Code Adjustment Policy

In an attempt to make our pro-am events as fair as possible for everyone involved and to maintain the integrity of the game, we will periodically adjust player codes (A, B or C).

When adjusting pro-am participants' player codes we carefully consider two major factors:

- Current, official USGA handicap index
- Most recent scores

Official USGA handicap index takes precedent over most recent scores.

“A Players” are individuals who have a GHIN handicap index of 0 - 7.9.

“B Players” are individuals who have a GHIN handicap index of 8 - 14.9.

“C Players” are individuals who have a GHIN handicap index of 15+.

Note: If it is clear a player is not posting their scores to the USGA GHIN service to avoid being bumped to a different player code, the player's code classification may be adjusted at the pro-am director's discretion.

Players are not required to have an official GHIN handicap index to compete in the TGF Knoxville Pro-Am Series. For those players who do not have official handicaps, their player classification will be based on the following pro-am scoring averages:

If a player has recorded a minimum of five competitive rounds and has been averaging 78 or below, they are considered an A player. If a player's scores fall between 78.1-86.4, they are a B player. Scores 86.5 or above designate a C player.

Note: The pro-am director may override these numbers when it is clear that a player is coded incorrectly. The director's decision is final.

Player codes will be updated every five (5) weeks.

Any B or C player that records an under par round will automatically be moved to an A player status for that event. Any C player that records a score under 75 will automatically be moved to a B player for that event. Remember a handicap is an average of your best scores; it indicates your potential ability.

Thank you for your support and understanding as we attempt to make the Pro-Am Series as fair as possible for everyone involved.
